

# Resin Bookmark

Create a personalised resin bookmark with this handy project kit.

## YOU WILL NEED:

- CHEMSET® Resin Bookmark Kit\*
- Digital scales accurate to 0.01g
- Plastic or metal box

## INSTRUCTIONS:

Cut a piece of the patterned paper to fit inside the bookmark mould.

Coat the paper in PVA (back and front) so the resin doesn't seep into the paper. It is best if you do several coats.

Before you use the paper with the resin make sure that the PVA is completely dry.

Place a mixing cup on your scales then re-zero the scales.

Pour 10g resin into the mixing cup.

Add 5g hardener to the mixing cup.

Stir carefully with a mixing stick until fully mixed making sure you get into the edges of the cup.

Let the enamel rest for a few minutes, this allows any bubbles caused by mixing to dissipate.

Pour some of the resin mix into the bookmark mould covering the surface.

Slide the paper into position, gently pushing the paper below the surface of the resin.

Make sure there are no air bubbles under the paper.

Add some more resin on top of the paper.

Add the decorative flowers and glitter to your design. You can use a cocktail stick to push the pieces into place.

You will have approximately 45 to 60 minutes to use the mixed resin. The amount of usable time will vary according to the amount you have mixed and the temperature of the room.

Once you are happy with the design, cover with a plastic or metal box (to protect from dust) and leave in a warm place (min. 20°C) to cure overnight.

When the resin is cured gently peel the mould away from the resin bookmark. The mould can be used over and over again.
